

Agiloft AI Core

Agiloft's AI leverages open-source libraries from global technology leaders and our proprietary algorithms to deliver state-of-the-art AI to our customers. Our AI-driven workflow automation improves visibility into your contracts data, makes business processes more efficient, and reduces risk.

Agiloft AI Core: The value is in the architecture

AI is changing rapidly, and capabilities built on proprietary frameworks even a year ago are already obsolete. Agiloft is the leader in an open standards-based approach to AI, ensuring our technology is always current. Agiloft AI customers benefit from:

- Modern machine learning infrastructure - native support for TensorFlow, PyTorch, Hugging Face, and Amazon AWS Sagemaker models.
- Ability to host AI capabilities on your dedicated Amazon Web Services (AWS) account and get no-code access to Amazon's prebuilt machine learning models, if desired.
- Bring your machine learning models built on other platforms into the Agiloft platform to analyze your data and automate AI-based decision-making.
- Key term and clause extraction: extract key terms and clauses from contracts automatically.
- Custom AI: work with our Data Science team to customize and extend any AI capability to fit your use case.

Review and Analyze Contracts

Agiloft AI scans your third-party contracts, applies tags to data points automatically, and compares third party language to similar language in your clause library. It also helps you quickly identify missing clauses and terms, and replace them with standard or fallback clauses from your clause library. Key terms from third party contracts are also automatically populated in Agiloft, saving you time and effort and ensuring that all contractual data is properly tracked.

As you are reviewing contracts, use Agiloft's workflow features to build your clause library in minutes. Clauses identified using AI can be added to your clause library with a few clicks, and then used to facilitate review of future contracts.

Agiloft AI Core: Licensing

AI Core Feature	Enterprise	Enterprise Extended
Access to pre-trained AI functionality	X	X
Consultation with Data Science team to optimize AI implementation	X	X
Implementation of AI-enabled Agiloft Contract Assistant for Word	X	X
Training AI to extract customer-specific data points		X
Training and tutorials for SageMaker/TensorFlow		X

Delivery and Custom AI: How it Works

Agiloft's data scientists work with your team to assess whether:

- Agiloft's pre-trained AI will meet your needs,
- Agiloft's pre-trained AI will meet your needs with light tuning or customization, or
- A total custom solution is required.

You will then work with our AI implementation team to build the AI solution to your requirements.

About Agiloft

As the global leader in agile contract lifecycle management (CLM) software, Agiloft is trusted to provide significant savings in purchasing, enable more efficient legal operations, and accelerate sales cycles, all while drastically lowering compliance risk. Agiloft's adaptable no-code platform ensures rapid deployment and a fully extensible system. Using contracts as the core system of commercial record, Agiloft's CLM software leverages AI to improve contract management for legal departments, procurement, and sales operations.
