

Artificial Intelligence

Agiloft AI Core

Transform your business operations with Artificial Intelligence. Uncover hidden value in your contracts and automate contracting operations through the power of the Agiloft AI Core.

Agiloft AI Core: The value is in the architecture

AI is the most rapidly changing area of technology today. Models built on proprietary frameworks even a year ago are already entering obsolescence. Agiloft is the leader of AI for Enterprise CLM through its open standards-based approach to Artificial Intelligence. With native support for TensorFlow, PyTorch, and Hugging Face models, you not only benefit from Agiloft AI capabilities that operate on state-of-the-art machine learning infrastructure, you can also easily train and deploy your own custom machine learning models on the Agiloft platform to analyze the data in your KB and automate AI-based decision making.

The AI Core natively integrates with the Amazon SageMaker platform, which enables the hosting of AI capabilities in your own dedicated AWS account and no-code access to Amazon's prebuilt machine learning models.

The AI Core can manage a dedicated SageMaker account for you, or you can use your own account for hosting custom-built AI capabilities. Agiloft can help you develop custom AI Capabilities with its world-class data scientists as well as its state-of-the-art platform and annotation services for the development of natural language processing AI capabilities.

AI-powered workflow automation delivered on a no-code platform

The AI Core integrates with a growing ecosystem of modern machine learning algorithms that enable Agiloft's AI Capabilities for CLM. Agiloft modules that use the AI Core can implement AI-driven data and workflow automation systems that make end-to-end management of business processes significantly more efficient, reduce risk in the contract lifecycle, and make contracts more profitable.

Prebuilt Natural Language AI Capabilities for contract lifecycle management

Agiloft is continuously extending the contracts AI, which is a set of AI Capabilities that is ready out-of-the-box to analyze contract documents and extract up to ninety different data points. The contracts AI also includes the automatic identification of contract types and the evaluation of contract risks by analyzing contract language in context of the organization's standard clauses and approved language. AI Capabilities for contract lifecycle management (CLM) include:

> **Classification:** Identify document or contract type

> **Risk Scoring:** Calculates contract risk based on contract language, approved language, and contract metadata

> **Data Extraction:** Extract metadata from contracts

> **Prioritization:** Prioritize contracts for review based on risk analysis

> **Clause Extraction:** Identify and extract clauses from contracts

> **Custom AI:** Customize and extend any AI capability to fit your use case without writing code

AI Capabilities benefits

- Use prebuilt AI Capabilities to immediately extract metadata and important clauses from contracts
- Classify, extract metadata, and analyze documents such as standard offers, invoices, agreements, etc.
- Automate batch processing as well as complete single document processing as needed
- Seamlessly integrate AI Capabilities with your existing tables, rules, and workflows
- Customize and extend any AI Capability to work with your use case scenario
- Deploy custom AI Capabilities in your own Amazon SageMaker account or let Agiloft host a dedicated SageMaker account for you
- Get access to state-of-the-art machine learning algorithms developed by Amazon and Facebook

Fully custom AI: How it works

The Agiloft AI Core is an integrative component of Agiloft that lets you connect KB data with major machine learning platforms, giving you access to state-of-the-art machine learning models. Connect your platform account with Agiloft and then use the Agiloft AI Core to configure, train, evaluate, and use available machine learning models with KB data. Configure Actions, Rules, and Workflows with your trained AI Capabilities using Agiloft's no-code platform.

Develop your own machine learning models using the AI Core's open AI architecture and fully integrated training environment, then deploy securely on Amazon SageMaker and instantly AI-enable your Agiloft CLM or other critical business process. There are virtually no limits on scale or complexity for extending your machine learning models with the Agiloft AI Core.

Connect your Agiloft KB with Amazon SageMaker to seamlessly configure, train, and use prebuilt machine learning algorithms to make sense of your data

Agiloft AI Core licensing: What's included

AI CORE FEATURE	ENTERPRISE	ENTERPRISE EXTENDED
Prebuilt AI Capabilities (for Extraction, Risk scoring, etc.)	X	X
Use AI Capabilities in Actions and Workflows	X	X
Modify Existing SageMaker/TensorFlow Algorithms		X
Training and Tutorials for SageMaker/TensorFlow		X
Build custom AI with your own machine learning models		X

About Agiloft

Organizations ranging from small enterprises to U.S. government agencies and Fortune 100 companies depend on Agiloft's top rated product suites for [Contract Management](#), [Service Desk](#), [Custom Workflow](#), and more. Agiloft specializes in automating processes that are too complex for competing vendors. Our best practice templates and adaptable technology ensure rapid deployment and a fully extensible system. For more information, visit <https://www.agiloft.com>.
