

Workflow

Agile Workflow Management

Agiloft has been providing complete workflow and process automation solutions for over a decade. Workflow management software should be an integral part of any business process automation.

Workflow products traditionally only provide a front end for visualizing business rules and processes, and require extensive custom coding and integration with a separate backend system to actually implement the workflow rules. Agiloft customers simply point and click to make the changes they need. No coding required.

The Complete Package

Agiloft provides a flexible and robust data model with a powerful workflow and business rules engine, allowing the software to map any business structure and automate the most complex business processes, all with no need for custom code.

Instead of providing an interface to create a workflow diagram that will still need to be built by programmers, Agiloft provides a drag-and-drop graphical workflow editor that builds and documents the workflow's actual behavior as you design it. As a result, new processes can be automated in record time, without programming.

Benefits

- **Consolidate operations** under a single extensible framework that adapts to changing business needs without programming
- **Increase efficiency** by automating new business processes within days or even hours
- **Reduce manual errors** and eliminate duplication of effort by automatically integrating all processes with essential data such as employee and asset information
- **Eliminate risk:** It is easy to modify and expand the system as your business grows, so there is no risk of outgrowing the solution.

Choose a solution that works
the way you do and enjoy
unlimited flexibility without the
need for custom coding.

Everything You Need

Agiloft offers the complete package for a comprehensive workflow solution:

- **The graphical workflow editor** controls status and state transitions and triggers the creation of task templates or approval workflows as needed for each process.
- **Configurable business rules** can validate data, send notifications, update data in linked records or external systems, run scheduled imports and exports, and more.
- **Task templates** can be applied to any task or approval workflow type, whether parallel, sequential, or conditional. Required, optional, and ad hoc tasks and approvals are supported.
- **Powerful search functionality** includes historical searching and finds records that meet particular criteria.
- **Charts, reports, and dashboards** provide actionable insight and information about your processes.
- **Fine-grained access permissions** provide the control needed for widespread use throughout your organization. Permissions extend down to the field level, allowing user specific access.
- **LDAP/MS Active Directory** and single sign-on simplify access, while Web Services and REST APIs enable real-time integration with other enterprise systems.
- **Full auditability** provided through historical snapshots that display the entire record as it existed at any point in the past and audit logs that allow any event type to be captured.
